

SmarTeam Project Search Tool

Challenges

- SmarTeam lacks the support for project-based object searches
- Native mechanisms only support entire database or single-level searches

Solution

- SmarTeam Project Search Tool
- Support searches on objects linked with a specific project

Features

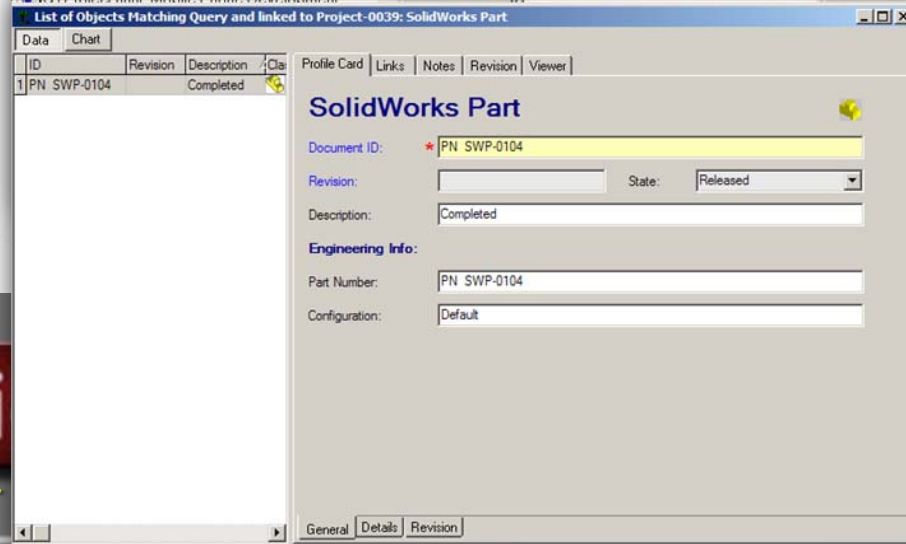

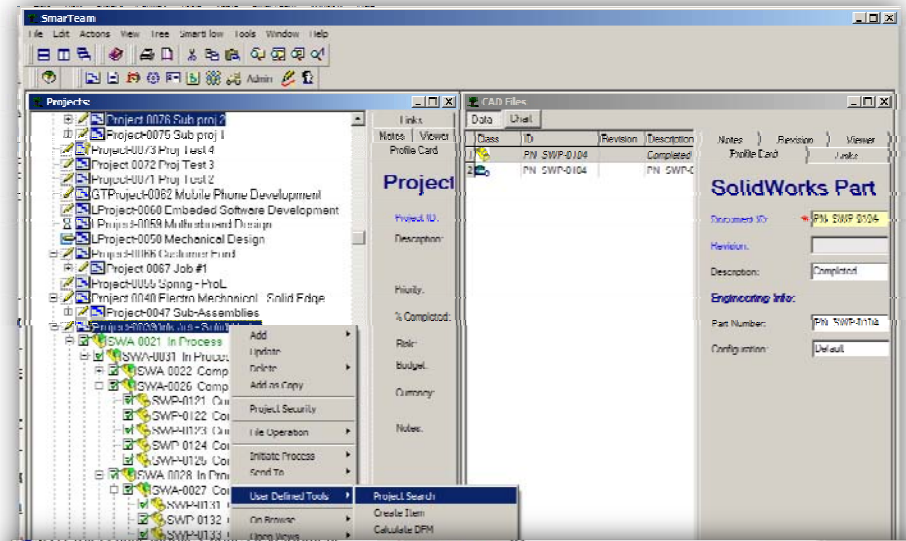

- Selectable search level for the project tree structure

Benefits

- Expedites project-level data and document searches

Example

- To determine if a given part is used in a particular project
 - The part may not be linked directly to the project
 - The part may be in assemblies that are linked to the project
 - The part may be linked to folders of the project
- The SmarTeam Project Search Tool will transverse the selected project tree to locate the part of interest
